

# SEPSIS: KNOW THE SIGNS ACT IN TIME

## TEMPERATURE

- Higher or lower than normal
- Chills or profuse sweating

## INFECTION

- Signs of a current or recent infection
- May include wounds, pneumonia, UTIs, or catheter-related infections

## MENTAL DECLINE

- New confusion or disorientation
- Sleepy, difficult to wake, or not acting like themselves

## EXTREMELY ILL

- Severe pain or discomfort
- Trouble breathing, rapid heart rate, or cold extremities

### What to Do:

- Call 911 or get emergency care immediately if sepsis is suspected.
- Early treatment can prevent organ damage and save lives.

### How Concierge Home Care Helps Prevent Sepsis:

- Skilled RNs monitor for sepsis warning signs during in-home visits
- LPNs provide wound care, catheter care, and medication support
- IV antibiotics can be administered in the home to prevent hospitalization
